

Are Vaccine Mandates Science-Based?

In the Pfizer COVID-19 vaccine clinical trial, zero unvaccinated adolescents 12 to 15 years of age suffered a severe case of COVID-19. In contrast, for every 1 case of non-severe COVID-19 in the unvaccinated group, there were 7 cases of severe (grade 3) systemic reactions in the vaccinated group.

H

Emergency Room

The clinical trial also found that 1 in about 1,100 vaccinated children 12-15 years of age had a grade 4 systemic reaction (fever greater than 104.0° F) that required an emergency room (ER) visit. The reaction occurred within one week of the first injection and led to withdrawal from the clinical trial.
